XIX. **STANDARD OPERATING PROCEDURES**

For laboratory work at:

_____

[Department or laboratory name, building, room number(s)]

which involves the use of hazardous chemicals, standard operating procedures have been prepared in order to reduce potential safety and/or health hazards to laboratory employees. These procedures include various engineering control measures such as laboratory and fume hoods, maintenance procedures for these engineering control measures including testing of proper function of such equipment, the use of appropriate personal protective equipment and the maintenance of such equipment.

The specific procedures that have been implemented are as follows:

(List or insert specific standard operating procedures. Add additional pages as deemed necessary. Print or type.)
