

## RESEARCH INCENTIVE PROGRAM

Updated 10/01/02

To maintain incentives for faculty to engage in sponsored program activity the University will reallocate earned Facilities & Administrative (F&A, formerly known as IDC) to the department which generated the F&A.

The research incentive reallocation is based on each department's generated F&A for the prior fiscal year. An adjustment to the allocation is made for any pharmaceutical sponsored drug study projects (see below). Once a year a query is run which summarizes the total F&A charged to each project within a department. A total of 10% of earned F&A from the prior year is returned to the department that generated the F&A. This return is made in quarterly installments during the following fiscal year

Pharmaceutical sponsored drug studies carry a minimum 10% institutional F&A. That 10% F&A is earmarked for the Provost and does not enter into the Research Incentive calculation.
