

## Web-Supported Teaching

Friday, July 16, 2004 with Kari Boyce (COAH) and Gary Loving (CON)

What does it take to design and deliver a successful online course? Or, maybe you're just considering offering a hybrid course, one that combines synchronous instruction with asynchronous Web-based learning experiences. Most principles of good instruction apply in an online environment, but application of these principles is often very different. Let's discuss some interactive online teaching/learning strategies. Examples of the strategies to be discussed include threaded discussion and online case studies.

Objectives:

- Identify published sources for best practice principles in online instruction.
- Illustrate and exemplify three online instructional best practice principles.
- Discuss specific applications of online instructional best practice principles, including threaded discussion and online case studies.
