

Embedding Videos to Play in Content

For videos to play in D2L rather than having to download, click the “New” button, then choose “Video or Audio” to upload the file so that it embeds in the module’s HTML template.

- To embed videos this way, in your modules, click the down arrow in the blue “New” button and select “Video or Audio”

- Click the Upload tab in the Add Video or Audio window to Drop or Browse for a file and Save.
